# safety

Since January 1st 1997 all electric and electronic appliances destined for the European market have to comply with the low voltage directive where applicable. This is indicated with the CE mark in conjunction with a declaration of conformity.

This means for you as a manufacturer that your product not only has to be in compliance with the applicable regulations, but that you also carry a legal responsibility towards the end user.

For many manufacturers this hurdle can be problematic. The following questions typically arise:

- Is my product affected by the low voltage directive?
- Are there other directives effective?
- Who informs me about the applicable harmonised standards?
- Who performs testing and approvals?
- Who supplies me with the test report for my technical documentation?

For all the answers we are your trustworthy partner. Montena emc is accredited by the Swiss Accreditation Service. We offer you the following services:

- Consulting during the design phase.
- Information about the components which can be used.
- Organization and performance of all tests and approvals required.
- Issue of test reports for technical documentation, or the supplying of valuable test results during the design phase.
- Providing of test reports which can be used in Switzerland to obtain the S+ mark from the Heavy-Current Inspectorate.
- Seminars.

Due to our international connections we are also able to provide you with:

- GS-mark approvals for the main German market
- NRTL scheme for the North American market
- S-mark approvals for the Japanese market
- NOM for the Mexican Market
- Test report and CB-mark
- CCA scheme
- Support for UL certification
- FIMKO, GOSTR and additional international approval marks

**Our target is to suit your  
actual needs. We want to be  
at your side to assist you  
if product safety matters.**
